Habitat® Coastalkleen™ Blanket & Roller Wash

Habitat Coastalkleen™ does not contain any water - we don't think you should pay to ship water. And Coastalkleen™ doesn't contain petroleum either - thought we'd save some for your car. So what is in it then? That's a secret made up of 100% raw materials from renewable resources in the U.S.A. It's not a secret that Coastalkleen™ does a superior job even without mixing oil and water. Just 4-6 capfuls will wash up an entire 40" unit and this one product works with conventional UV, co-cure EB & heat set inks.

Coastalkleen™ works differently than a petroleum based wash. The keys to achieving excellent results from Coastalkleen™ are:

- Wash-up blades should be wiped clean and in good working condition (if this is your first time using Coastalkleen™, we recommend replacing the wash-up blades)
- Rollers must be in contact
- Use less product – about 50%-75% less than a regular wash

Performing Manual Roller Cleaning:

Keep in mind that you are going to use 50%-75% less than you would normally use of petroleum based roller wash. Wash up speed should be set at a high idle. Replace or make sure the wash-up blades are wiped off before you start. The first time you use Coastalkleen™ we recommend replacing the wash up blades.

Suggested Automatic Wash up Settings:

1. Set solvent cleaning cycle at low (e.g. 10%-20% for Heidelberg)
2. Set water rinse cycle at medium to high (e.g. 60%-90% Heidelberg)
3. Insure wash up/scraping blade is tight against the roller

Manual Blanket Cleaning:

Dampen a rag with Coastalkleen™ and wipe blanket clean. You may also dampen a rag with water and then apply Coastalkleen™. This helps to removes excess paper dust. Dry the blanket to remove any excess residue.
